CosyDevon's winter warming tips

- 1 Turn your thermostat down by just one degree and you could save around £65
- 2 Bleed your radiators every now and then to release trapped air as it makes them more efficient
- 3 Fit thermostatic valves to your radiators so you can turn the heat up and down in each room as you need to
- 4 Give your boiler a yearly check-up. That way you'll know it's working safely and efficiently
- 5 Don't overheat your water, fit a cylinder thermostat and set it to between 60°C and 65°C
